Features

Feature #1: E-stamp queuing mechanism & load tests

For a large volume of e-stamp generation, the queuing mechanism is required to avoid direct interaction between the third-party API and reduce the dependency solely on single third party for stamp generation response.

Queuing mechanism in e-stamp API processes all the requests to the third party via queue for success & failure response of the generation of e-stamp.

Process each e-stamp API request via queue to the third party.

With the queuing process it becomes easier to re-try or process on the same failed requests for which response is not received due to some issue at third party or our end. Reasons for failure could be if the third party is down, the saved requests in queue can be processed later on once the third party is up & running, so stamp paper can be generated for the same initialized requests without wasting balance or initiating duplicated requests.

Improvements

Improvement #1: API improvements

- Min/Max date validation
- Impact on e-mail sending from manage e-mail notifications
- Supported document support for .msg,.txt,.zip file
- Default value input for text field

Improvement #2: Default value for text field

Initiator can define a default value for text field which will appear on sign page to the signers while signing the document.

The screenshot displays a document signing interface with two signers: Deepika Assudani and Mr. Yogesh Lokhande. The 'Company Name' field for Mr. Yogesh Lokhande is highlighted in blue and contains the text 'Text 1'. To the right, a 'Text properties' panel is visible, containing various configuration options. The 'Default Value' field in this panel is highlighted with a red box and contains the text 'Cygnet Infotech'. Below the 'Default Value' field is a 'Save' button.

Field	Value
Name	Deepika Assudani
Designation	Business Analyst
Company Name	Cygnet Infotech
Date	12.05.18
Name	Mr. Yogesh Lokhande
Designation	VP- Strategy
Company Name	Text 1
Date	12.05.18

Text properties

Label: Company Name

Mandatory
 Non-Mandatory

Input Limit: 20 Max -

Validation: None

Text Alignment: Middle

Default Value: Cygnet Infotech

Save

Improvement #3: UAE PASS Gembox integration

Improvement #4: UX Improvements

- Redirection Changes
- Pagination and improvements to fetch records
