

Release Notes

Release Date: 2nd September, 2022

Contents

Features	3
Feature #1: Download InProgress document	3
Feature #2: End to end n level reassign matrix	4
Improvements.....	6
#1: CFR improvements.....	6
#2: API improvements.....	6
#3: E-stamp consumption- Report improvements added required additional details.....	7
#4: Manage E-mail notifications – Configuration for which involved users should receive the notification when document expiry due date is extended.....	7

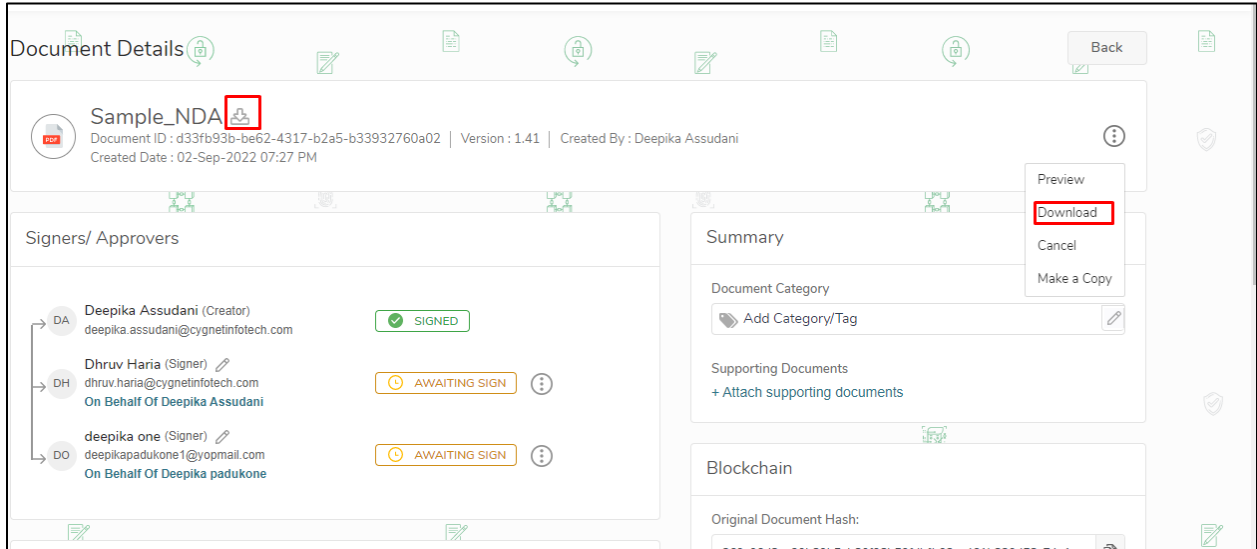

Features

Feature #1: Download InProgress document

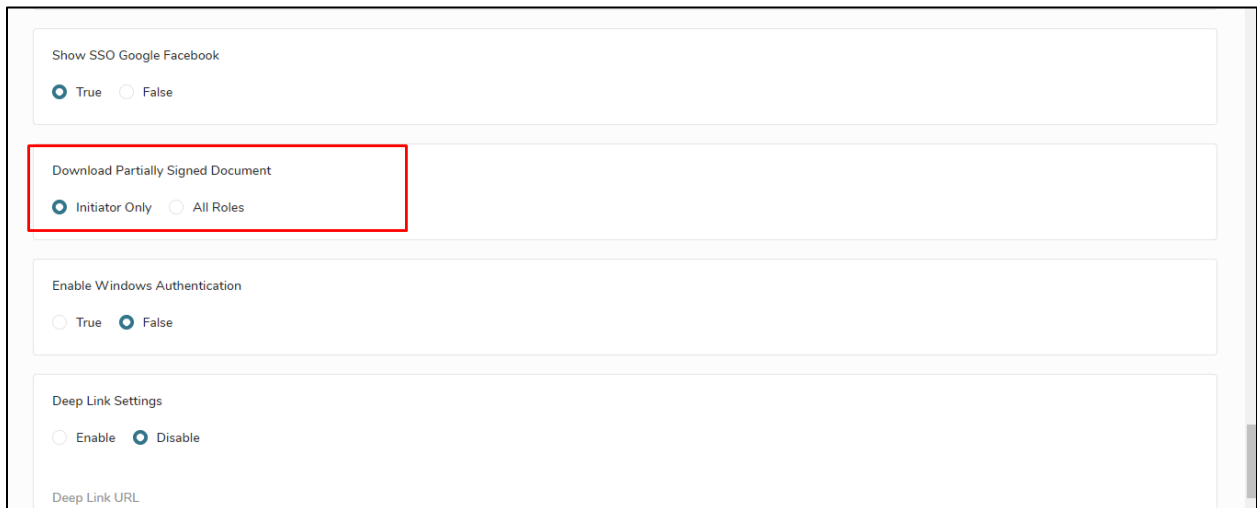

Support given for download document in progress. Partially signed document can now be downloaded from all Documents Listing, details.

The download option in the hamburger menu will Download document in current state.

The unsigned document in original format can be downloaded from the icon next to document name.

For security & customer based requirement use cases, this option is given as a configuration to be managed at the Cygnature admin level whether only initiator can be able to download the partially signed document or all involved signers across entire tenant.

Feature #2: End to end n level reassign matrix

Feature for document re-assignment. Give access of re-assigned documents to old signers.

Show traceability on details page that signer is a reassigned signer.

Configuration at client admin account level that re-assign option only should be given based on setting at useradmin level

The screenshot shows the 'Document Details' page for a document titled 'Sample_NDA'. The document ID is d33fb93b-be62-4317-b2a5-b33932760a02, version 1.41, created by Deepika Assudani on 02-Sep-2022 at 07:27 PM. The 'Signers/ Approvers' section lists three users: Deepika Assudani (Creator, SIGNED), Dhruv Haria (Signer, AWAITING SIGN, with a red box around 'On Behalf Of Deepika Assudani'), and Deepika one (Signer, AWAITING SIGN, with a red box around 'On Behalf Of Deepika padukone'). The 'Summary' section includes 'Document Category' and 'Supporting Documents'. The 'Blockchain' section shows the 'Original Document Hash' as 369c06d8ee20b89b5ab80f98b59fd93ac461b830d58c74e1c.

The screenshot shows the 'Document History' page for the document 'On Behalf Of Deepika padukone'. The history list includes: '02-Sep-2022 07:27 PM - Deepika Assudani signed and submitted the document with E-Signature.', '02-Sep-2022 07:36 PM - Deepika re-assigned the document to Dhruv Haria for signing with reason: Re-assign test.', '02-Sep-2022 07:42 PM - Deepika Assudani changed the signer from Deepika Assudani to Deepika padukone.', and '02-Sep-2022 07:45 PM - Deepika padukone re-assigned the document to deepika one for signing with reason: Re-assign test.'. The third and fourth entries are highlighted with a red box. The 'Blockchain' section shows the same 'Original Document Hash' as in the previous screenshot.

Admin configuration for re-assign

If in the below settings, Decide during workflow option is set, then initiator can decide at document level whether to give option of re-assignment to the signer or not

User admin can choose this option at user definition level settings

Other Configuration

Please select the Document Store from the below given options

Decide during workflow
 Store Doc in Cygnature
 Remove from Cygnature

Document Re-assign Option

Enable for all
 Disable for all
 Decide during workflow

- Hide Subscription Details

NDA Delegate Test	Deepika Assudani	Deepika p, Yogesh L	01-Aug-2019 06:47 PM	Details

Improvements

#1: CFR improvements

1. Configuration to admin at user definition level whether users can define CFR, Non-CFR or decide during the workflow whether to create a CFR/Non-CFR document. Admin can define below setting for the user:

The screenshot shows a user configuration form with the following elements:

- At the top, three radio buttons: "Enable for all" (selected), "Disable for all", and "Decide during workflow".
- A section titled "CFR Configurations" (highlighted with a red box).
- A checked checkbox labeled "Authenticate All Signatures".
- A section titled "Please select the CFR User workflow options" (highlighted with a red box) containing two radio buttons: "Create only CFR workflow" (selected) and "Decide during workflow".
- A link "- Hide Subscription Details" at the bottom center.
- "Back" and "Save" buttons at the bottom right.

2. Configuration for CFR signature authentication – Authenticate all signs or not

For CFR signs earlier in a continuous signing execution process for multiple signatures, all signs were authenticated. With this configuration, admin user can specify whether the users(signers) of that account need to authenticate all signs or not

This is a close-up of the "CFR Configurations" section from the previous screenshot. It highlights the "Authenticate All Signatures" checkbox, which is checked. Below it, the "Please select the CFR User workflow options" section is visible, showing "Create only CFR workflow" as the selected option.

#2: API improvements

- Created a new API endpoint to purge signed documents from application
- Support to download partially signed document from Document Download API flag

#3: E-stamp consumption- Report improvements added required additional details

Consumption Report

User Name: _____ Date Duration: All Apply Clear Export

User Name	Order ID	State	Stamp Ref No.	Amount	Status	Order Placed
