	Feature #2: SFTP configuration – Username Password based authentication	3
	Feature #3: Security & CFR Enhancements	4
	Feature #4: Show document owner name in PDF properties	9

# Features

## Feature #1: Signature font configuration in Signature appearance

With this option owners of the document can now configure the Signature font options available with their signers to add signature on the document.

Based on the selected fonts, font options will be available with the signers of the document to add signature.

Organization Admin users can set this configuration for all the document signers of their respective accounts. Individual subscription users can set this in their respective Signature appearance module under Settings for all the documents sent from their account.

**Note:-** If any previous signature is saved for the signer account, it will not be added by default but signer has to select from the available signature fonts according to the settings done by the document owner.

### Signature Appearance Settings:

## Feature #2: SFTP configuration – Username Password based authentication

This feature is upgrade for the authentication method to connect with the external FTP servers to export and manage documents from Cygnature application.

With the public key-based authentication, we have also introduced option to authenticate and connect to the FTP with the Username & password-based authentication. Based on the

For Connecting to external FTP servers to export documents, client can add the required credentials based on key/password-based authentication as per the need and establish connection with Cygnature.

# Feature #3: Security & CFR Enhancements

### • Lock user notification

With the update we have added a feature for a limit on the maximum no. of invalid login attempts by the user.

After 5 invalid login attempts, user will be locked out of the system and a notification will be sent to the Cygnature admin for cloud users and to the user admin for multi-user subscribers.

Once the admin unlocks user, he can only login to the system only after the account is unlocked by the admin to login again.

CYGNATU by Cygnet in	RE	V	Your account is locked due to invalid login attempts. Please contact your admin to unlock requesting the reset link.

#### • Re-use old password validation

In the password configuration module, admin can set a configuration for password validation criteria for how many old passwords can be used re-used by the end-user while resetting the password.

System will check from password history and throw a validation to the user if he/she tries to re-use an old password previously set for the account.
